### Portfolio Advisor Quarterly Commentary as of 12-31-2011

Scotia Selected Moderate Growth Portfolio delivered a return of 3.2% for the quarter versus the 3.8% return of the blended benchmark, consisting of 42% MSCI World, 33% S&P/TSX Composite and 25% DEX Universe Bond indices.

The fourth quarter of 2011 ended with equities largely outperforming bonds, due to improving investor confidence. Positive U.S. economic news and the actions taken by European policymakers in dealing with the eurozone debt crisis were key factors in buoying the markets. Also, China's pre-emptive action to slow growth rates to sustainable levels appears to have worked, reducing concerns over rapid inflation.

The DEX Universe Bond Index returned 2.0% during the quarter. While all three major sectors delivered positive

returns, only provincial bonds outperformed the Index. With uncertainty surrounding the sustainability of the global economy, the Canadian equity market was resilient, returning 3.5% over the quarter, with six of the 10 sectors ending in positive territory. Over the period, the health care sector led the overall market, while information technology, materials, consumer discretionary and utilities posted a negative return. Global equities were also impacted by market uncertainty and the MSCI World Index ended the quarter with a gain of 5.3% (in Canadian dollars).

Scotia Global Opportunities Fund detracted from the portfolio's performance, while Scotia Canadian Dividend Fund had the largest positive impact on the portfolio's return.
