MARKET COMMENTARY

The Scotiabank Money Market Fund returned 0.01% for third quarter of 2009. Economic recovery is on its way albeit it might be at a snail's pace. Positive news came from the consumer confidence numbers beating expectations in September. Inflation appears to be under control. Core inflation for August is at a five year low of 1.4%, which is a substantial decline from last year's cyclical high of 2.7%. The three month T-bill rates have rallied to historical lows from 0.19% to 0.12% as the market continues to anticipate that the Federal Reserve will keep interest rates at the same level until late 2010. At the same time, the one year T-bills rate have also improved from 0.345% to 0.175% as investors tried to lock into the attractive higher rates. We continue to maintain a high level of liquidity within the Fund by allocating a large portion of the portfolio maturities within one month. Investments have been made in some floating rates notes for a yield pickup and some six to nine month products to maintain the neutral average term of the portfolio at approximately 60 days.

Net Asset Values and performance figures are net of all Fund expenses.

\$10,000 growth from inception date until October 30, 2009
