

## Nova Scotia: 2019–20 Outlook

- A forecast moderation of Nova Scotia's economic growth to a rate nearer to 1% in 2019–20 is expected to be underpinned by somewhat softer job creation. The province's 1.5% total employment gain in 2018 was the strongest since 2004, while the 3% rise in full-time positions was the best result since 1998. We project total job creation of 1.3% in 2019, still a solid pace.
- Amid above-trend employment and economic growth, Nova Scotia saw an upswing in population growth. A 1.8% climb in the two years to 2018—the fastest since 1984–85—mirrors rising immigration and a reversal of outflows to Western Canada. This has stoked home building, reflected in a 12-year high of nearly 4,800 housing starts in 2018. Population growth and home construction should cool with job creation in 2019–20.
- More moderate export growth is also expected to underlie province's more muted growth trajectory. Merchandise exports rose by more than 7% last year, the strongest gain since 2014 (see chart), after which point natural gas output began to wind down. Manufacturing sector activity—concentrated in seafood and tires—drove much of that gain and should hold steady through 2020, but softer import demand will come from both the US and China as expansions ease in both countries.
- Infrastructure spending and business investment will likely be more stimulative. Under Nova Scotia's Capital Plan, outlays of \$691.3 mn<sup>1</sup> are expected to come in FY20—a figure that represents a 14% increase over FY19 and the largest annual total since FY13. Private-sector investment should also rebound this year after a number of projects completed in 2017 posed a drag on growth last year. Decommissioning work at offshore gas fields should support capital outlays, as should provincial accelerated depreciation measures, and there is significant upside potential via the \$8 bn Goldboro LNG project, a final investment decision on which is expected this year.
