

Saskatchewan: 2019–20 Outlook

- Our projected acceleration of economic growth in Saskatchewan rests fundamentally on expectations of stronger job creation. Employment growth in the province remained stubbornly weak even after the worst of the commodity price correction, with a two-year rise of just 0.4% over 2017–18 that lagged Alberta's climb of nearly 3%. Building on solid 1.4% year-to-date gains in full-time positions (see chart), we look for total job creation of 1.2% this year, which would represent the best result since 2013. Still, that rate remains well below the 1.7% annual average experienced over 2010–14, and mirrors our forecast of slower economic growth than at the height of the oil price boom.
- The agricultural sector faces largely positive prospects. Early indications are that most areas of the province will be spared of flooding after above-trend snowfall in the winter months, and new market access is presented by trade agreements with Europe and the Pacific Rim. Yet protectionist Chinese actions may hinder exports of canola products, which made up 11% of provincial merchandise shipments abroad last year.
- Food processing is an area of strength for Saskatchewan, though it is unlikely to repeat its recent torrid performance. Food manufacturing shipments rose 10.9% in 2018—more than any other jurisdiction. A USD 140 mn¹ expansion of a pulse processing plant should support the industry's continued growth alongside funding vis-à-vis the Federal Protein Industries Supercluster awarded to the Prairie Provinces.
- Infrastructure spending, expected to fall by about 4% in FY20, will pose a drag on 2019–20 growth, though less so than forecast a year ago. Relative to last year, the 2019–20 budget projects a cumulative \$755 mn rise in *Saskatchewan Builds Capital Plan* outlays over FY20–22, nearly half of which is sourced from federal infrastructure funding.
